

# TMPro Range Breakout

The Worlds Simplest Strategy

Gold / XAUUSD · M15 · constructed teaching charts

1. Mark 10:00–11:00 UTC

Four candles open at 10:00, 10:15, 10:30 and 10:45. Freeze their highest high and lowest low at 11:00.

3. Measure the candle body

Below 100 pips: standard next M15 open. At 100 pips or more: use the retracement rule on page 2. Exclude wicks.

2. Wait for a completed breakout

Above the high: buy direction. Below the low: sell direction. A wick outside with a close inside is not confirmation.

4. Keep the distances fixed

80-pip stop; choose a 160-pip (2R) or 240-pip (3R) target from the actual entry. No alignment? Let it go.

## Standard buy: body below 100 pips

XAUUSD · M15 · Buy / standard entry

Constructed teaching candles · UTC · 1 example pip = 0.10 price units

Breakout body

**60 pips**

Retracement required

**Not required**

Body midpoint

Green = up · red = down · hollow marker = entry open only; no outcome shown.  
Close-outside breakout interpretation. Example pip size is not a broker default.

Four candles in the shaded box form the reference range. The 11:00 candle closes above it with a 60-pip body. The hollow marker shows the 11:15 entry open only. For a sell, reverse the direction.

Example arithmetic

These drawings use 1 pip = 0.10 price units. An 80-pip stop is an 8.00 price move; 160 pips is 16.00. This is an illustration assumption, not a broker default. Verify your exact gold contract.

Charts illustrate the close-outside interpretation. The source does not settle whole-body versus close-only confirmation; declare your test interpretation first.

Constructed OHLC, not historical prices or results. Green = up; red = down. Entry markers do not show a completed future candle or trade outcome. Scroll charts sideways on small screens.

# Long body? Wait for half back.

100+ pips includes exactly 100 pips.

## 1. No immediate entry

Measure the completed breakout open-to-close body in verified pips. Keep that candle as the fixed reference.

## 3. Use the next M15 open

A later candle must reach the midpoint. Let that candle finish; then consider the following open, only if all rules still align.

## 2. Wait for at least 50%

Midpoint = (open + close) / 2. Buy: retrace down to it or lower. Sell: retrace up to it or higher.

## 4. Let unsuitable trades go

No retracement means no entry. Candle count alone is not a signal. Do not chase or widen the stop.

## Delayed sell: 120-pip body, at least 60 pips back

### XAUUSD · M15 · Sell / wait for retracement

Constructed teaching candles · UTC · 1 example pip = 0.10 price units

Green = up · red = down · hollow marker = entry open only; no outcome shown.  
Close-outside breakout interpretation. Example pip size is not a broker default.

The 11:00 candle completes at 11:15. The later 11:15–11:30 candle reaches the 50% midpoint. The hollow marker shows the 11:30 entry open. For a buy, mirror the direction. The breakout candle's own wick does not qualify.

### Fixed distances, not frozen price levels

Keep the 80-pip stop and chosen 160/240-pip target from the actual entry. The course reads retracement as a midpoint touch, then next-open entry after that candle completes; it does not add a midpoint-close requirement.

Verify the pip convention and declare a demo-test protocol for news, risk limits, cutoffs and re-entry. Break-even and partial exits are not specified in the supplied transcript. No martingale or grid.
